Education

Adani University *July 2023 – July 2027*
B.Tech. in Computer Science and Engineering

- CGPA: 9.25/10
- **Coursework:** Database Management Systems, Operating Systems, Data Structures and Algorithms, Object-Oriented Programming, Computer Networks, Machine Learning, Distributed Computing, Cybersecurity, Cloud Computing

Experience

Software Engineer Intern *Remote*
Polarcut *Feb 2026*

- Engineered a Remotion-based caption system with frame-accurate timing, word-level motion effects, and LLM-driven semantic emphasis across 4 stylized templates, reducing subtitle production time by 70% per video.
- Implemented an internal AI prompt-to-motion-graphics pipeline for text and vector animations powering Shorts B-roll, replacing a third-party API and reducing estimated per-asset inference cost from ₹60 to ₹12 (80% lower cost).

Software Engineer Intern *Remote*
Toucan Labs *June 2025 – Aug 2025*

- Architected and deployed a full-stack, enterprise-grade observability platform using Grafana Cloud, leveraging OpenTelemetry standards to provide unified logging (Loki), metrics (Prometheus/Mimir), and Application Performance Monitoring (APM) with distributed tracing (Tempo).
- Designed and implemented a centralized notifications system, including an in-app notification center, Firebase push notifications, and an admin announcement panel, delivering real-time updates with 98%+ delivery success.
- Deployed and managed the full production stack (frontend, backend, MongoDB) on a VPS using Dokploy, with rolling blue-green deployments and a GitHub Actions CI/CD pipeline, enabling fully-automated zero-downtime releases.

Skills

Languages and Frameworks: Python, Go, Next.js, React, TypeScript, JavaScript, Flask, SQL, C++, Bash

Tools: Git, GitHub, Linux, Docker, DigitalOcean, Azure, CI/CD Pipelines

Projects

reverie Website YouTube

- Developed an AI-powered Next.js journaling platform utilizing a conversational RAG pipeline (NLU, pgvector, knee detection, LLM) to provide actionable emotional insights.
- Architected a FastAPI microservice to serve reflection prompts via GPT-OSS and self-hosted Hugging Face models, using bge-m3 (Cloudflare Workers AI) for embeddings.
- Engineered core backend flows for analytics and "chat with journals" features with scalable retrieval and prompt engineering using Spring Boot and Java.

shadowfax *GitHub*

- Built a minimal HTTP/1.1 server from scratch in Go over raw TCP - implemented request parsing, routing, chunked-encoding, persistent connections, middleware, panic recovery, graceful shutdown, and concurrent request handling.
- Developed middleware for CORS, CSRF protection, static file serving, basic authentication, and request logging.
- Achieved **1.4k req/s** under resource-constrained conditions, and ensure robustness through unit and integration testing.

pyscreenrec *GitHub*

- Developed PyScreenRec, a lightweight cross-platform Python library, by designing an intuitive API for seamless control of recording functions (start, pause, resume, stop).
- Achieved over **128,000 downloads** on PyPI, reflecting strong adoption and real-world impact.

Leadership and Achievements

Vice President, Adani Student Programming and Development Club *Aug 2024 – July 2025*

- Organized technical events such as hackathons, coding challenges, and workshops, impacting over 200 students.

Winner, Techathon 2025 *Jan 2025*

- Awarded first place for building a website focused on road safety and accident prevention.

Second Runner Up, Odoo Hackathon 2026 *Jan 2026*

- Secured second runner up place for building a restaurant POS system, streamlining retail transaction workflows.
